

Alveolar Osteitis (Dry Socket)

SaliCept™ Oral Patch is indicated for use in extraction sites and management of alveolar osteitis (dry socket). It is also intended for the management of all types of oral wounds, injuries and ulcers of the oral mucosa. It relieves pain by adhering to and protecting affected tissues from further irritation. It is safe if swallowed.

A new innovative product that provides:

- Significant reduction in the incidence of AO compared with clindamycin-soaked Gelfoam®.²
- Significant reduction in the cost of the materials and in the time involved in management of the symptoms of AO compared to clindamycin-soaked Gelfoam®.²
- Enhanced patient comfort.²
- Simplified surgical care.²
- No adverse events were noted in the treatment group during trial.²
